Performing a laparoscopic urethrovesical anastomosis after a radical prostatectomy is challenging. Sabbagh and colleagues developed a low-fidelity urethrovesical model to allow surgical trainees to practise. They studied the effect of this training versus basic laparoscopic suturing. For their results, see **page 22**.

Effectuer une anastomose uréthro-vésicale par voie laparoscopique, après une prostatectomie radicale, représente un défi. Sabbagh et collaborateurs ont mis au point un modèle uréthro-vésical de basse fidélité pour permettre aux chirurgiens en formation de s'entraîner. Ils ont étudié l'effet de cette formation contre la suture laparoscopique de base. Pour lire leurs résultats, veuillez vous reporter à la **page 22**.
