

Kidney stones are considered one of the most painful urologic disorders. What is the best way to evaluate first-time patients who experience calcium oxalate stones? In this issue of *CUAJ*, Dr. Paterson and Dr. Razvi debate whether or not an in-depth metabolic evaluation is needed for these first-patients sufferers. See page 209 for the discussion.

On considère que les lithiases rénales sont parmi les troubles urologiques les plus douloureux. Quelle est la meilleure façon d'évaluer les nouveaux patients qui ont des calculs d'oxalate de calcium? Dans ce numéro du *JAUC*, le docteur Paterson et le docteur Razvi s'interrogent sur la nécessité d'une évaluation métabolique en profondeur pour ces nouveaux patients souffrants. Veuillez vous reporter à la page 209 pour lire cette discussion.
